2015 ROUNDUP/RESOURCES FOR IMMUNIZATION PROGRAMS
ECBT Mission

• To protect families and individuals from vaccine-preventable diseases by: raising awareness of the critical need for timely immunizations for people of all ages, increasing the public’s understanding of the benefits of vaccines, increasing confidence in the safety of vaccines, ensuring that all families have access to life-saving vaccines, and advocating for policies that support timely vaccination.
EVERY CHILD BY TWO’s NEW PROGRAM TO PROMOTE THE NEED FOR VACCINATIONS FOR PEOPLE OF ALL AGES.
The Vaccinate Your Family (VYF) website – VaccinateYourFamily.org - replaced ECBT’s Vaccinate Your Baby website.

For the public

Includes:

- Information on vaccines for pregnant women, babies/children, preteens/teens, and adults
- Answers to most frequently asked questions from parents
- Stories of people affected by vaccine-preventable diseases
- Links to peer-reviewed studies on vaccines and vaccine safety
- Links to variety of credible websites and immunization resources created by ECBT and other credible organizations
Vaccination can protect every member of your family.

Learn more about vaccines for all ages to protect yourself and your loved ones from infectious disease.

Pregnancy  Baby & Child  Preteens & Teens  Adults
PRETEENS & TEENS

As your children move toward their teen years, they become more independent. While it may seem as if they need you less, in reality they still need your help to be protected from devastating and often deadly vaccine-preventable diseases.

Many diseases spread more easily in community settings that adolescents frequent such as schools, locker rooms and summer camps. You can help your adolescents remain healthy by getting them vaccinated with the following five essential vaccines:

- TDAP
- HPV
- INFLUENZA
- MENINGOCOCCAL
PREGNANCY

Pregnancy is such a special time for the entire expecting family. It is a time of planning and preparing for the birth of a precious child. It is also an important time to begin considering the steps you can take to keep your children healthy, from the moment they take their first breath. Did you know that your baby can be born with immunity to infectious diseases? By getting yourself vaccinated against diseases such as flu and whooping cough during your pregnancy, you are not only protecting yourself, but you are also passing immunity directly to your baby.

**Before becoming pregnant:** If you are **planning to become pregnant**, it’s important to make certain you are up-to-date on all of your vaccines. Vaccination against rubella (German measles) is particularly important, as the disease can cause unborn babies to have birth defects with devastating, lifelong consequences, or even die before birth. Before being vaccinated, women can have a pre-pregnancy blood test to see if they are immune to the disease. Most women were vaccinated as children with the MMR (measles, mumps, rubella) vaccine, but you should confirm this with your doctor. If you need to get vaccinated against rubella, you should avoid becoming pregnant until one month after receiving the MMR vaccine and, ideally, not until your immunity is confirmed by a blood test.

**If you are already pregnant:** Did you know that your actions while you are pregnant can enable your baby to be born with protection against dangerous infectious diseases? By getting vaccinated while pregnant, you can pass on immunity to your child that will last until your little one is ready to begin his or her own vaccination series.

Your healthcare provider, including your OB-GYN or midwife, can tell you which vaccines are right for you throughout your pregnancy, but the Centers for Disease Control and Prevention (CDC), the American College of Obstetricians and Gynecologists (ACOG) and the American College of Nurse-Midwives (ACNM) **all strongly recommend the following two vaccines for pregnant women**.
ADULTS

Ages 19-49
- Influenza

Ages 50+
- Pneumococcal Disease
- Shingles
- Varicella
- Influenza
- Flu Season

AGES 50+

At every stage of life, it’s important to stay healthy and active, and vaccines are an essential way to keep deadly and debilitating diseases at bay. Some vaccines you may need include:

- Influenza Vaccine
- Pneumococcal Vaccine
- Shingles Vaccine
- Td (tetanus and diphtheria) Vaccine
- Tdap (tetanus, diphtheria and pertussis) Vaccine

In addition to the vaccines mentioned above, other vaccines may be recommended for you based on certain risk factors. Please, talk to your healthcare provider and/or pharmacist to find out which vaccines you may need. Click here to view the adult immunization schedule.

Grandparents Toolkit

Becoming a grandparent is an exciting new stage in your life. There’s lots of planning to do from a baby shower to helping set up the nursery and maybe even preparing to take care of the baby when your children return to work. Don’t forget that vaccines, particularly flu and Tdap (whooping cough), can help protect the health of both you and your grandchild. Learn more about how you can prepare with our easy to share, easy to print resources:

Extended Immunization Deadline Enforced Strongly in Montana

December 4, 2015

An extended deadline for students in Missoula County, Montana to get up-to-date on their vaccinations passed on Tuesday; but some students were still not vaccinated.

As of Monday, however, only about 150 students in Missoula County had not yet met the vaccination requirements - leaving officials feeling hopeful that full compliance with the new laws will soon be achieved.

States Take Steps Towards Broader HPV Vaccine Coverage

December 4, 2015

Multiple states are proactively seeking ways to increase coverage of the HPV vaccine. The National Association of County and City Health Officials recently awarded $35,000 grants to ten local health departments as part of an effort to address HPV vaccination rates.

Home > Parent Perspective, Preventable Diseases, Testimonials, Vaccine Advocacy > 147 Kids Died From Flu Last Year, My Scarlet Was One of Them.

December 7, 2015  Christine Vara  Go to comments  Leave a comment  Edit

Rebecca Hendrickx, Every Child By Two’s newest parent advocate, decided to share this guest post on Shot of Prevention after connecting with us on our Vaccinate Your Family Facebook page.

I never imagined that jumping on Facebook to catch up with friends would have me reliving the worst day of my life.

My five-year-old daughter, Scarlet Anne Taylor, died as a result of influenza last season.

She was the first child out of 147 who would die from flu in the 2014-2015 season. She passed away on December 19, 2014, in Tacoma, WA, just 48 hours after the onset of symptoms and within 4 hours of when she arrived at the hospital.

It all happened so quickly that I still struggle with the reality of it all. One day she was sent home from school with a fever, the next day she was pronounced dead before we even knew the cause. It wasn’t until I received a call from the medical examiner a week and a half later that I would come to learn that my daughter had died from influenza (H1N2).

I was on Facebook back in October when I saw this chilling post on Every Child By Two’s Vaccinate Your Family Facebook page.

Last week marked the official end of the 2014-2015 flu season. Sadly, the season was marked by 146 pediatric deaths. Of those 146 children, we know the vaccination status of 123 of them — 14 were ineligible for vaccination due to age, 15 were vaccinated, and 94 were unvaccinated. As we begin the 2015-2016 season, we urge every one to get a flu vaccine. No matter what your age, the flu can be dangerous and even deadly. A flu vaccine is your best defense.

(Sadly, another death was reported to the CDC following this post, which brought the total number of children who died in the 2014-2015 season to 147.)

317 Coalition Mission

- Mission: to educate Members of Congress about the needs of the CDC immunization program, and advocate for increased federal appropriations to ensure that children and adults can receive recommended vaccines to protect them from disease.
- The coalition is solely focused on advocating for increased 317 funding, and as such will focus on implementing the policies of the Advisory Committee on Immunization Practices and other relevant policy making bodies.
317 Coalition Steering Cmte.

- Paul Offit, MD, Director, Vaccine Education Center, Chief, Division of Infectious Diseases, Children's Hospital of Philadelphia, and former member of ACIP
- Amy Pisani, MS, Executive Director, Every Child By Two
- Walt Orenstein, MD, Associate Director, Emory Vaccine Center, Emory University and former Director of the CDC National Immunization Program
- Deborah Wexler, MD, Executive Director, Immunization Action Coalition
- Donna Brown, JD, MPH, Government Affairs Counsel, National Association of County and City Health Officials

</tbody>
</table>
Although the action alert sent to advocates was to urge members to advocate for the Senate’s funding level of $611 million, with the passage of the budget deal and additional dollars expected for the Labor-HHS-Ed appropriations bill, our ask is back to our $650 M – which is same level we requested during the spring to the appropriations committee.

The continuing resolution expires on December 11
- Likely the subcommittees will combine many bills into a large omnibus package

Thimerosal Articles in Today’s Issue of Pediatrics

The AAP has announced their endorsement of the recommendation of the WHO’s Strategic Advisory Group of Experts on Immunization pertaining to the use of thimerosal in vaccines. Three captivating commentaries accompany their endorsement of the use of thimerosal in vaccines. The first titled "Ban on Thimerosal in Draft Treaty on Mercury Why the AAP’s Position in 2012 Is So Important" provides the rationale for the call for the removal of thimerosal from vaccines in 1999. The commentary concludes with this decisive statement: "Had the AAP known what research has revealed in the intervening 14 years, it is inconceivable to us that these organizations (AAP and USPHS) would have made the joint statement of July 7, 1999. The WHO recommendation to discontinue the ban on thimerosal must be heeded or it will cause tremendous damage to current programs to protect all children from death and disability caused by vaccine-preventable diseases."

Today's Shot of Prevention Post provides insight regarding the proposed global ban on thimerosal and how it could cost the lives of countless children throughout the world... read more
