IIS Initiatives Update

NAIIS Meeting
October 12, 2021
Rebecca Coyle, MSEd
Liz Abbott, MPH

Access to Data
Regardless of where you received a vaccine....

You and your healthcare provider need access to your vaccination record
Data Lakes, Data Warehouses

- Multiple jurisdictions are enabling the use of secondary databases or partnerships to avoid further load on IIS
  - Data lakes that don’t interfere with production intake (e.g., Minnesota, California)
  - Interagency Agreements (IAAs) that allow for broader processing, matching, and sorting of data for payers (e.g., Oregon)

The Evolution of Vaccine Records & Patient Access

It is critical to understand - the issuance of a digital record does not create the policy for how these records may be used. It simply moves a paper record to a digital format much like paper mail largely moved to e-mail.
Clinical Trial Data

- 300,000 + records
- Participants are being excluded without a record in an IIS
  - University requirements
  - Event requirements
- Clinical trial sites maintain data
- Working with IIS, manufacturers & CDC to identify the best way(s) to report this data to IIS
IIS and Long-Term Care

New and Evolving Guidance

- Recommendation for 3rd dose of COVID-19 for immunocompromised
- ACIP Booster Recommendations
- Requirement for all Skilled Nursing Facility (SNF) staff to be vaccinated for COVID-19
IIS, a tool to...

- Determine
  - COVID-19 vaccination status (timing, product)
  - Booster needs

- Report vaccines administered
  - ~32% of SNFs serve as vaccine provider

*Ability of employers to assess staff vaccination status/needs varies

AIRA and Partner Efforts

- Collaboration with AHCA
  - Barriers and successes for onboarding SNFs
  - Outreach, education and TA

- August Discovery Session Webinar
  - AHCA, CDC updates
  - State experiences
