Percentage of Outpatient Visits for Respiratory Illness Reported By The U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Percentage of Outpatient Visits for Respiratory Illness by Age Group Reported by the U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet), Weekly National Summary, May 21, 2023- November 25, 2023

This system monitors visits for ILI (fever and cough or sore throat), not laboratory confirmed respiratory virus and may capture patient visits due to other respiratory pathogens that cause similar symptoms.
Outpatient Respiratory Illness Activity by Jurisdiction
Week 47, ending November 25, 2023

Deaths Reported Previous Weeks | Deaths Reported Current Week
Summary

• Influenza activity continues to increase in most parts of the country
  • Most notably in South Central, Southeast, Mountain, and West Coast regions
• Influenza A(H1N1) is still the most frequently detected, although influenza B is also being detected
• CDC estimates that there have been at least 1.8 million illnesses, 17,000 hospitalizations, and 1,100 deaths from flu so far this season
