Influenza vaccine
Safety Information

Learn more at www.Flublok.com

Flublok is approved for people 18-49 years old to prevent influenza disease. The most common side effect from Flublok is pain at the site of injection. Other side effects may occur and include fatigue, headache and muscle aches.

Flublok should not be administered to anyone with a severe allergic reaction (e.g., anaphylaxis) to any vaccine component. Flublok does not contain any preservatives, antibiotics, egg proteins or latex.

Tell the doctor if you have ever experienced Guillain-Barré syndrome (severe muscle weakness) within 6 weeks of receipt of a previous dose of influenza vaccine. If you notice any other problems or symptoms following vaccination, please contact your healthcare professional immediately. Vaccination with Flublok may not protect all individuals.

Ask your healthcare professional, call 1-888-855-7871, or visit www.flublok.com for more information about Flublok and access to the complete package insert.
