Adult Immunization Resources

(Page 1 of 8)

Although many wonderful resources are available to assist adult immunization providers, it can be challenging to locate the best information to meet specific needs. The resource listing on the following pages was developed by the Immunization Action Coalition (IAC) for presentation at the 1st National Adult Immunization Summit held in Atlanta on May 15–16, 2012. This listing is the initial step in the development of a searchable database on IAC's website, www.immunize.org. In the interim, providers may find this online list to be helpful. This information will continue to be updated as new resources are identified.

Adult Immunization Resources

About the Library

The Adult Vaccination Resources Library (AVRL) gathers adult immunization resources into one location, allowing healthcare providers and the general public to pinpoint adult immunization resources that can be used in a clinic setting or for individual education. Using simple keyword and other selected criteria, you can search the library to find the resources that meet your needs.

[>> tips on how to search the library](#)

Submit a Resource or Comment

To offer comments, report broken links, or submit suggestions for resources that should be included, please send an email to laurel@immunize.org. Please put "AVRL Suggestion" in the subject line.

About the Library

The Adult Vaccination Resources Library (AVRL) gathers adult immunization resources into one location, allowing healthcare providers and the general public to pinpoint adult immunization resources that can be used in a clinic setting or for individual education. Using simple keywords and other selected criteria, you can search the library to find the resources that meet your needs.

>> [tips on how to search the library](#)

How to Search the Adult Vaccination Resources Library (AVRL)

Follow these five steps to locate desired resources contained within the AVRL.

Step 1: Select Search Criteria

Several options are available to help locate appropriate resources. These may be used singly or in combination, but we recommend that you begin your search using no more than 1-2 criteria at a time. Using multiple criteria will restrict the search and reduce your chances of obtaining resources.

Search Terms

Type a keyword or phrase that represents the information you are seeking in the Search Library box.

- To search using a phrase, simply place a plus sign (+) between the individual words that make up the exact phrase, e.g., "hepatitis C".
- To exclude a certain term, place a minus sign (-) before it, e.g., "-measles".
- Individual terms are matched to any part of words in the title or description. A search for "flu" will result in a listing of resources with "flu" or "influenza" in the title or description.
- The search is not sensitive to the case of the search terms. So a search for "indications" is the same as a search for "Indications".

Search a Pre-Defined Category

- Vaccine:** To find resources providing information about selected vaccines.
- Condition:** To view information related to specific health conditions that might impact the use of vaccines.
- Age Group:** To find resources related to several broad age ranges (4-15 years of age) that affect the use of certain vaccines.
- Special Population:** To locate resources associated with certain population groups that influence vaccine

- Media Type:** To locate resources that are available in a diverse types of media, such as printable PDFs or videos.
- Owner/Publisher:** To select resources that have been published by a specific agency, organization, or company.
- Publication Date:** To view resources according to how recently they were published, within a two-year range. Because general websites are updated frequently, they are classified as "ongoing", rather than being listed by a specific publication date.

Combination

Any combination of search terms and pre-defined categories may be selected at one time. For example, "shingles" may be typed into the search terms box and "general population" may be selected for the audience type. Note: Selecting multiple options restricts the overall number of resources returned.

Step 2: Click on either of the "Go" buttons

After selecting desired terms/categories, click on either of the "Go" buttons to obtain results. When the selected resources are returned, you may choose whether you would like the results to be listed by Title (in alphabetical order) or by the date the resource was posted in the AVRL. Using the Date posted option provides an easy way to find new resources as they are added to the library.

Step 1: Select Search Criteria

Step 2: Click on either of the "Go" buttons
